

Intent Misalignment Taxonomy

Communication-Fault Taxonomy from Drift-Bench

Flaw of Intention

The user's goal is obscured or distracted.

Indirect Intent

The stated request does not explicitly express the true goal, which must be inferred from context.

Contextual Irrelevance

Off-task context competes with the real goal, leading to misinterpretation.

Flaw of Premise

The request depends on a false or unsupported assumption.

False Presupposition

Requests assume something that is false or not supported by available evidence.

Factual Error

A task-relevant value, entity, or fact is incorrect or inconsistent with reality.

Tool Mismatch

The request exceeds what the available tools or system capabilities can accomplish.

Flaw of Parameter

Key slots are missing or distracting details interfere.

Insufficient Information

A required parameter, constraint, or key detail is missing, making the request underspecified.

Irrelevant Information

Extra / distracting details do not help identify the product or task and may mislead the interpretation.

Flaw of Expression

The wording supports multiple plausible readings.

Vagueness / Subjectivity

The description is subjective, or open to multiple interpretations.

Referential Ambiguity

The referent (entity, object, or attribute) is unclear.

Lexical Ambiguity

A word or phrase has multiple possible meanings in context.

Syntactic Ambiguity

The sentence structure permits multiple plausible readings.
