

Distributed Scanning

Sweep the canvas; accumulate evidence from many local signals

Region Counting

How many separated regions are inside the square?

Connected Component Counting

How many connected components does the graph have?

Bounded Face Counting

How many bounded faces does the planar graph enclose?

Tangled Loop Counting

How many distinct closed loops are tangled together?

Singleton Shape Counting

How many shapes in the image appear exactly once?

Sequential Traversal

Follow a connected structure step by step, end to end

Arrow Chain Following

Follow the arrow chain from the start; report the labelled terminus.

Color Zone Sequencing

Report the labels of the regions the curve visits, in order.

Line Intersection Sequencing

Follow the labelled curve; list the curves it crosses, in order.

Traversal Point Ordering

Starting from the green S, list the labelled points in visit order.

Maze Path Tracing

Which pair of border openings is connected by a path through the maze?

Visual Attribute Transfer

Carry a fine-grained property across regions of the image

Constellation Match Counting

How many translated copies of the template dot-pattern appear?

Silhouette Match Counting

How many field contours exactly match the template silhouette?

Stroke Match Counting

How many strokes in the field match the template stroke?

Field Difference Spotting

Of the nine cells, how many are identical between the two panels?

Signal Difference Spotting

Of the nine signal segments, how many match across the two panels?

Contour Difference Spotting

How many contours changed between the two panels?

Stroke Difference Spotting

How many strokes changed between the two panels?
