

Question: What is the best way to avoid a collision? Choose from the following answers only.

- A) Come to a complete stop.
- B) Brake suddenly.
- C) Speed up.
- D) Change lane to right.
- E) Change lane to left.
- F) None of the options.

Baseline

Step-by-Step Reasoning:

1. In the front view (middle image, top row), there is a clear road with **no immediate obstacles** or vehicles directly in the path of the ego vehicle.
2. The road markings indicate a directional path, suggesting that the vehicle should continue in its current lane.
3. There are **no visible pedestrians** or vehicles that require immediate evasive action.
4. Given the current speed of 20.3 km/h and the clear path, there is no immediate need to stop or brake suddenly.

Final Answer: F) None of the options.

Ours-Student (Stage3)

Final Answer: A) Come to a complete stop.

Ours-Teacher (Stage2)

Step-by-Step Reasoning:

1. In the front view (middle image, top row), there is a clear road with **no immediate obstacles** or vehicles directly in front of the ego vehicle.
2. The road markings indicate a clear path with no immediate need to change lanes or stop abruptly.
3. There are **no visible pedestrians** or vehicles in the immediate vicinity that would require sudden braking or stopping.
4. The road appears to be clear and there are no visible hazards that necessitate a lane change.
5. Given the current speed of 16.17 km/h and the clear road ahead, there is no immediate threat of collision.
6. Therefore, none of the options A, B, C, D, or E are necessary to avoid a collision.

Draft Answer: F) None of the options.

Critique: Re-examine the front view: **Is there a pedestrian crossing?** Is there a stop sign? **The image shows a pedestrian crossing the road ahead.** Please re-evaluate the scene for any stop signs or **pedestrian crossings**.

Step-by-Step Reasoning:

1. Re-examining the front view (middle image, top row), **there is a pedestrian crossing the road ahead.**
2. The presence of a pedestrian crossing **requires the vehicle to come to a complete stop to ensure safety.**
3. There are no visible stop signs, but the pedestrian crossing itself is a critical hazard that necessitates stopping.
4. Given the current speed of 16.17 km/h and the pedestrian crossing, **the safest action is to stop.**
5. Therefore, the correct action to avoid a collision is to come to a complete stop.

Final Answer: A) Come to a complete stop.
