

Goal: arrange the green and yellow blocks in a vertical line

t = 0

move the yellow
pentagon to the center of
the board

t = 1

move the yellow star to
the top side of the
yellow pentagon

x 4

t = 5

move the green cube to
the top side of the
yellow star

x 2

t = 7

move the green star to
the bottom side of the
yellow pentagon

x 2

t = 9

Done

Reasoning: The goal is to arrange ... Currently, the green cube, yellow star, and yellow pentagon are already aligned vertically in the center of the board. The green star is located to the right of this column ..., the green star needs to be moved into the vertical line. Moving it to the bottom side of the yellow pentagon will extend the existing line and include all the required blocks.

Instruction: move the green star to the bottom side of the yellow pentagon.
