

Goal:

move the red and yellow blocks
into a T-shape

Reasoning: ... The yellow pentagon is on the far left, the yellow star is in the middle of that group, and the red pentagon (likely under the arm) needs to be to the right. However, looking closely, the red pentagon is actually not in the scene... Wait, the task says "red and yellow blocks". I see a yellow pentagon, a yellow star, and a red moon. The red pentagon is mentioned in the previous response but I don't see it. Let me re-examine the blocks. Ah, the block under the arm is likely the red pentagon as per previous context... Let's assume it's near the arm... The red pentagon is likely the block being manipulated by the arm, which seems to be positioned over a red object...
Instruction: move the red pentagon to the right side of the yellow star.
