

Goal:

move the green and red blocks into a vertical line

Reasoning: The goal is to arrange the red moon, red pentagon, green cube, and green star into a vertical line. Looking at the current scene, the red moon is positioned at the top center, and the green cube is in the center. This starts forming a vertical column. The red pentagon is located to the right of the red moon, and the green star is further to the right and below the green cube. To continue building the vertical line, I need to bring the remaining target blocks into the same central column. I will now move the red pentagon to the position directly below the green cube.

Instruction: move the red pentagon to the bottom side of the green cube.
