

Goal:

move the green and red blocks into a vertical line

Reasoning: The goal is to move green and red blocks into a vertical line. Currently, there is a green cube on the left and a green star with a red cube near it on the right. To start forming a vertical line, moving the red cube towards the green star seems like a logical first step. I will move the red cube to the left side of the green star to bring them closer together.

Instruction: move the red cube to the left side of the green star
