

Goal: Pack foam brick and sugar box into medium tray, soup can and tuna fish can and gelatin box into large tray

Reasoning: ... the first image shows ... The second image, from the left wrist perspective, clearly shows ... The third image ... The long-horizon goal specifies packing foam brick and sugar box into the medium tray. However, looking closely at the first image, the foam brick is already inside the medium tray, and the sugar box is still on the table being held by the left arm. The large tray contains the foam brick, tape, and other items. **Wait, re-examining Image 1:** The medium tray has a blue square (foam brick). The large tray has tape, a carrot-shaped object, and part of the sugar box is visible but mostly outside. **Actually, looking at Image 1 again,** the sugar box is on the table between the trays, held or near the left gripper. The large tray has the tape and some colorful blocks. The medium tray has the blue foam brick. The goal says "Pack foam brick and sugar box into medium tray". Since the foam brick is already in the medium tray, the next logical step for the short-horizon instruction would be to pick up the sugar box, which is currently on the table, and place it into the medium tray. The left arm is interacting with the sugar box area. Therefore, the immediate action ... **Instruction:** Pack the sugar box into the medium tray.
