

 Question Pool

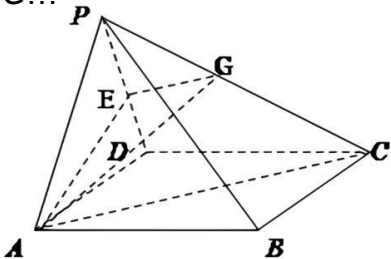

Question:

In the pyramid $P-ABCD$ the base $ABCD$ is a square, the lateral face PAD is an equilateral triangle, and plane $PAD \perp$ plane $ABCD$. See the diagram. Find cosine of the dihedral angle $A-PC-D$.

1. Instruction Generation

Solution: Since the base $ABCD$ is a square, ... Let E be the midpoint of PD . Through E , draw $EG \perp PC$ with foot G ...

Instructions:

1. Mark point E as the midpoint of PD .
2. Draw $EG \perp PC$ with foot G .
3. Draw segment AE connecting A to E .
4. Draw segment AG connecting A to G .

2. SVG Generation

Please identify the difference between the question image and solution image based on the instructions... Generate SVG paths for these new elements only on a 1000x1000 canvas.

Output:
<svg> ...</svg>
