

Question: Identify all devices connected to 25kΩ resistor. Select all that apply.

- A. 95A current
- B. 87Ω resistor
- C. 41mΩ resistor
- D. 60kV voltage
- E. 21Ω resistor

GPT-5.1

The 25 kΩ resistor is directly connected to:

- The 95 A current
- The 87 Ω resistor

So the correct choices are:

- A. 95A current**
- B. 87Ω resistor**

Circuit-MLLM

"To find the connections for 25kΩ resistor, we examine the circuit area surrounding it, including all connected wires and immediate neighbors. <|latent_start|><|latent_pad|><|latent_pad|><|latent_pad|><|latent_pad|><|latent_end|>We identify paths from 25kΩ resistor to 21Ω resistor, 95A current, 87Ω resistor. The final answer is: A, B, E."

Question: List all connections for 77Ω resistor. Select all that apply.

- A. 28Ω resistor
- B. 34Ω resistor
- C. 56U0 Control_current
- D. 16Ω resistor

GPT-5.1

The 77 Ω resistor is connected between the left vertical conductor and the right vertical conductor at the junction between the 28 Ω and 16 Ω resistors.

Thus, it is connected to:

- 34 Ω resistor (same left node) → **B**
- 28 Ω resistor (same right node) → **A**
- 16 Ω resistor (same right node) → **D**

It is **not** directly connected to the 56U0 current source.
Correct choices: A, B, D.

Circuit-MLLM

"To find the connections for 77Ω resistor, we examine the circuit area surrounding it, including all connected wires and immediate neighbors. <|latent_start|><|latent_pad|><|latent_pad|><|latent_pad|><|latent_pad|><|latent_end|>We identify paths from 77Ω resistor to 16Ω resistor, 28 Ω resistor, 34Ω resistor, 56U0 Control_current. The final answer is: A, B, C, D."

Question: What is connected to cmu? Select all that apply.

- A. rpi
- B. Cju
- C. R0
- D. gmvp

GPT-5.1

From the small-signal hybrid-π model shown, (C_{μ}) is the capacitor between the base node (B) and the collector node (C) . It is not connected to (r_{π}) , (r_o) , or the dependent source $(g_m v_{\pi})$ directly.

So none of the listed options apply.

Correct selections: none of A-D.

Circuit-MLLM

"To find the connections for cmu, we examine the circuit area surrounding it, including all connected wires and immediate neighbors. <|latent_start|><|latent_pad|><|latent_pad|><|latent_pad|><|latent_pad|><|latent_end|>We identify paths from cmu to Cju, gmvp, rpi, r0. The final answer is: A, B, C, D."
