

Full-response bidirectional drift

Prefix-averaged log-ratio deviations

Real response tokens 6784-6886

Highlighted window: $s_{\text{GeoMean}} = 1.0021$, $s_{\text{CARM}} = 1.0692$

$\log r_t > 0$ $\log r_t < 0$

it 's a math problem context (likely Chinese Ga ok ao or similar

competition style), " m /n format " with integers usually accepts

negative numer ators . \n

Also , usually \$ m , n \$ are copr ime and \$ n > 0 \$. \n\n

Let 's check if \$ f (x) \$ could be complex ? No , log base 2

usually implies real domain . \n

Domain \$ 0 \le x < 7 \$. \$ 9 -x \$ is positive . \n

So \$ f (x) \$ is real .
